PROFESSIONAL SUMMARY

DevOps and Cloud Engineer with 20+ years of platform engineering - CI/CD pipelines, containerized applications, infrastructure as code, and production monitoring and observability on Linux with Ansible, Terraform, Docker, Kubernetes, Python and Bash across AWS, Azure and GCP. Containerized Jabil's iFactory platform onto Kubernetes across approx. 112 plants, automated Raymond James releases with Ansible and Jenkins, and ran Sprint's 50-server billing mediation estate at 99.999% uptime for 14 years as the on-call Tier 3 owner: 70% faster deployments, 60% fewer deployment errors, 50% lower alarm MTTR, \$2M saved through custom routing software.

TECHNICAL SKILLS

IaC & configuration management: Terraform, Ansible (playbooks, roles, YAML, Jinja2), CloudFormation, Puppet, Chef, Salt

CI/CD & version control: Azure DevOps, GitHub Actions, GitLab CI/CD, Jenkins, Octopus Deploy, AWS CodePipeline, Git, pull-request code review and branching/tagging strategy; canary / A-B / blue-green deployment

Cloud: AWS (EC2, S3, RDS, VPC), Microsoft Azure (VMs, Storage, Virtual Networking, Azure DevOps), Google Cloud Platform, OpenStack, hybrid cloud, migration and cost optimization

Containers & virtualization: Docker, Kubernetes, microservices and service mesh, HashiCorp Nomad and Consul, LXC, Podman, KVM, VMware ESX/vCenter/Horizon, VDI

Monitoring & observability: ELK Stack (Elasticsearch, Logstash, Kibana), Splunk, Dynatrace, Prometheus, Grafana, centralized logging, alerting and dashboards, SLOs/SLIs, on-call incident response, postmortems and root cause analysis (RCA), SRE practices, ServiceNow/AIOps integration

Unix / Linux / OS: RHEL, CentOS, Debian, Ubuntu, HP/UX, Solaris, FreeBSD, Red Hat Satellite, Windows Server, Active Directory / IAM

Programming & scripting: Python, bash / korn / zsh, PowerShell, Perl, Ruby, PHP, SQL, C / C++ / C#, Java, JavaScript / TypeScript

Databases: Oracle, MySQL, PostgreSQL, SQLite, Microsoft SQL Server

Operations & ITSM: on-call and Tier 2/3 escalation, troubleshooting, SOPs and runbooks, release and change management, capacity planning, backup and disaster recovery, SLA adherence, ITIL, Agile / Scrum, Jira, Confluence

Networking & security: IPv4/IPv6, routing, firewalls, load balancers and reverse proxies (nginx, Apache), Cisco IOS, Wireshark / libpcap, POSIX sockets, DNS, SSH, RADIUS, site-to-site VPN, VOIP / SIP / Asterisk, vulnerability scanning and patching

PROFESSIONAL EXPERIENCE

VIMOPS | Kansas City, MO (Remote)

Founder & CEO / DevOps Engineer | May 2020 - Present

- Cut client deployment times 70% by automating infrastructure with Ansible, Terraform, Docker and CI/CD (GitLab CI, GitHub Actions) across AWS, Azure and GCP, improving multi-cloud reliability.
- Reduced build failures by over 50% by architecting scalable CI/CD pipelines in GitHub Actions and Jenkins.
- Maintained 99.9% client application uptime with automated backup, disaster recovery and server provisioning workflows in Ansible and Docker.
- Reduced deployment-related service disruptions 90% by refactoring a client's legacy monolith into containerized microservices.
- Improved system reliability 80% by deploying and operating highly available Kubernetes clusters for client workloads.
- Designed cloud migration strategy for 30+ clients, reducing infrastructure costs by an average of 75%.

JABIL | St. Petersburg, FL

Senior Infrastructure Automation Engineer | Mar 2018 - May 2019

- Reduced deployment time for critical iFactory infrastructure by 50% by building CI/CD build and release pipelines in Azure DevOps and Octopus Deploy with automated testing gates.
- Cut deployment errors 60% with Terraform infrastructure as code and centralized ELK logging, making builds repeatable.
- Cut new-developer onboarding time 30% by containerizing all iFactory applications with Docker - breaking siloed apps into microservices - and deploying them on Kubernetes across approx. 112 manufacturing plants.
- Reduced manual configuration time 70% with a comprehensive Ansible playbook library for deploying, configuring and maintaining on-premises and cloud resources.
- Drove DevOps adoption for iFactory across approx. 112 plants - canary, A/B and blue-green releases in Azure DevOps and Octopus Deploy, plus CI, automated testing, alerting and documentation standards replacing manual releases.

RAYMOND JAMES | St. Petersburg, FL

System Administrator (Contract), Capital Markets | Feb 2017 - May 2017

- Cut release deployment times 50% with Ansible playbooks and Jenkins pipelines that automate releases across test and production environments with consistent configuration.
- Anchored Linux SME and tier-3 application administration for the Capital Markets team's GBST Syn back-office trade-processing suite in a highly regulated financial environment.

CODESIGNED | Atlanta, GA (Remote)

Product Manager & Software Engineer | Nov 2015 - Sep 2016

- Designed and maintained on-premises and Azure infrastructure (site-to-site VPN, routing) for 20 large enterprise customers.

SPRINT (now T-Mobile) | Overland Park, KS

Software Engineer, Accounting Operations / Billing Mediation | Jul 2001 - Mar 2015

- Decreased deployment errors 30% and sped releases 40% with a production change-management system built on Ansible and GitLab CI.
- Cut time-to-resolution for actionable alarms 50% by deploying the ELK stack and HP OpenView for observability and alerting across multiple mediation platforms.
- Anchored Tier III support, root cause analysis and on-call escalation for 14 years across every Sprint billing mediation platform, resolving critical issues with a 98% success rate and reducing service downtime 20%.
- Saved \$2 million annually versus a vendor solution by designing and leading development of an automated EDR routing application (Perl, Python, shell) that distributed switch usage records to rating, billing, fraud and analytics systems.
- Sustained 99.999% uptime (about 5 minutes/year) for 14 years across the 50-server bare-metal and virtualized RHEL/CentOS/Ubuntu mediation estate through disciplined patching, vulnerability scanning, hardware selection and vendor acceptance testing.

PROJECTS

corkscrew | Creator and Maintainer | C, GNU Autotools, GitHub Actions | 2000 - Present | github.com/patpadgett/corkscrew

Tunnels OpenSSH through HTTP/HTTPS proxies; 194 GitHub stars, 36 forks, GPL-2.0. Packaged in Debian, Ubuntu, Red Hat, CentOS, FreeBSD and Cygwin; reviewed in Linux Magazine (Issue 166, 2014) and 2600: The Hacker Quarterly, demonstrated in books and YouTube videos, and has its own Wikipedia article. 2026 modernization added GitHub Actions CI with regression tests and ASan/UBSan sanitizer builds, updated Autotools checks and a documented security model (SECURITY.md); reviews and merges community pull requests and supports distribution packagers.

EDUCATION AND PROFESSIONAL DEVELOPMENT

Lake Career & Technical Center - Camdenton, Missouri | Certificate, Graphic Arts

- Self-directed study in DevOps practices and Infrastructure as Code (2017-2018) leading directly to the Jabil Senior Infrastructure Automation Engineer role
- Continuous hands-on training in Linux administration, ITSM/service delivery, cloud platforms, and automation scripting
